

## **Mahindra Australia launches the '60 Series' line of tractors**

**Mahindra 8560 4WD loading Hay Bales.**

Mahindra Australia proudly launched the '60 Series' line of tractors on 26<sup>th</sup> November, 2009. The '60 series' is the most rugged, heavy-duty line of tractors to date. The 8560 4WD is the first model to debut in this new series. It features an 83 horsepower engine, which provides enough power to haul the largest loads. The standard four-wheel drive provides optimal traction and pulling power. These tractors are designed for primary and secondary tillage, livestock operations, crop protection, slashing, haulage and loader applications.

This tractor has been very well received by dealers and customers. The Mahindra 8560 4WD further strengthens Mahindra's product offering in the 60-80 PTO HP segment, wherein the Mahindra 8000 4WD has already gained an enviable position of being among the top two selling models, of any make in the country.
